

OPEN METERING SYSTEM

OMS-GROUP

THE OMS CERTIFICATION PROCESS

These Two Test Centers Are Available

DVGW Certification Body, Bonn

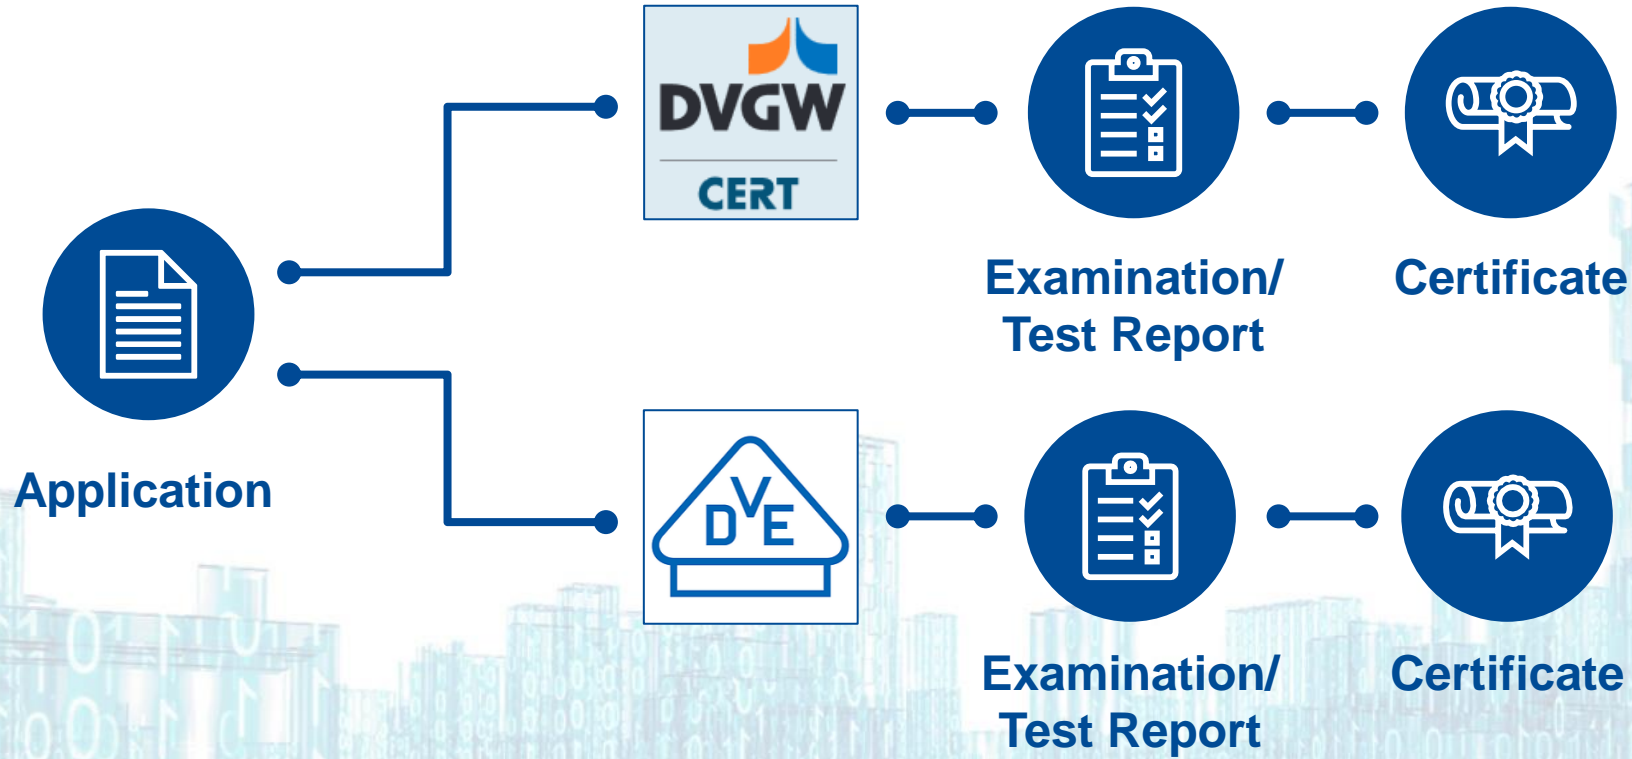

By providing proof of conformity based on the DVGW Standards and Codes of Practice, as well as recognized standards and test specifications, DVGW Certification Body offers product manufacturers, specialist companies, utility companies and experts the opportunity to document to their customers and market partners that the state of the art has been observed in relation to their respective range of activities.

VDE Testing and Certification Institute, Offenbach

With a VDE certification, manufacturers have the certainty that their product complies with the current normative and legal safety requirements as well as the recognized rules of technology. In doing so, we support manufacturers already during the development process and thus ensure early fault detection and cost savings.

The OMS Certification Process

Certification

Application to VDE TIC or DVGW Certification Body

<https://www.dvgw-cert.com/en/gas-products/applications.html>

Measurements are carried out at the Engler-Bunte-Institute (EBI) in Karlsruhe

<https://www.vde.com/tic-en/industries/smart-metering-vde/oms-certification>

Measurements are carried out by the VDE TIC in Offenbach

Based on the test report, both test centers issue a certificate.

Certification

Publication on the OMS website

With this certificate, an application can be made to the OMS-Group to add the product to the [certified products page](#).

Surveillance Procedure

Production control by the manufacturer in self-monitoring at least every 6 months. External monitoring every 2 years. The self-monitoring and the currently used firmware are checked.

The monitoring of an OMS certification takes place after 2.5 years on the basis of a random sampling in the market.
